JERUSALEM COLLEGE OF ENGINEERING (An Autonomous Institution) Approved by AICTE & Affiliated to Anna University Accredited by NAAC with 'A' Grade Chennai – 600 100

DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

B.E. CSE (ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING)

CURRICULUM

REGULATION 2021

CHOICE BASED CREDIT SYSTEM

JERUSALEM COLLEGE OF ENGINEERING (An Autonomous institution affiliated to Anna University, Chennai) (Approved by AICTE, Affiliated to Anna University Accredited by NBA and NAAC with 'A' Grade) Velachery Main Road, Pallikaranai, Chennai 600 100

DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

VISION OF THE INSTITUTION

Jerusalem College of Engineering is committed in emerging as an international institution of excellence in imparting the finest quality engineering, technology and management education rooted in ethical and societal values through various academic programmes, multi-disciplinary research, consultancy and entrepreneurship activities, and hence in contributing towards social transformation and nation building.

MISSION OF THE INSTITUTION

- Generating abundant resources and making conducive policies, the management led by the Chief Executive Officer strives towards promoting globally competitive academic programmes augmented with value added courses, in-plant training, co-curricular activities and ambience that support intellectual growth and skill acquisition.
- Promoting collaborative trans-border research programmes, continuing education in synergy with academia, industries and research organizations leading to real time solutions and lifelong learning
- Transforming young men and women into competent professionals and entrepreneurs motivated by a passion for professional excellence, driven by human values and proactively engaging in the betterment of the society through innovative practices and academic excellence.
- Facilitating effective interaction among faculty and students, and fostering network of alumni, industries, institutions and other stakeholders for successful career gain and placement.

VISION OF THE DEPARTMENT

To impart high quality knowledge in cutting edge contemporary Artificial Intelligence technologies in par with industrial standards and to produce highly competent graduates, researchers, entrepreneurs, innovative professionals and ethical engineers with the problem solving and leadership abilities of current and emerging technologies to meet the demands of society and global economy.

MISSION OF THE DEPARTMENT

- To provide students a problem-solving and analytical education that emphasises skills and values in order to improve their roles in expertise domains.
- To transform students into technically competent graduates through research based Artificial Intelligence and Machine Learning projects and activities in the emerging areas.
- To educate the students to be successful entrepreneurs by providing quality education and enhancing skills of the students.
- To inculcate the values of professional ethics, social concerns, environment protection and lifelong learning.

I. PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO 1:** Graduates with ability to employ Artificial Intelligence and Machine Learning principles and techniques to analyze requirements, realize technical specifications and create engineering solutions.
- **PEO 2:** Graduates with collaborative learning and team-work spirit through multidisciplinary projects and diverse professional activities.
- **PEO 3:** Graduates with strong knowledge, competence and soft skills that allows them to contribute ethically to the needs of society and accomplish sustainable progress in the emerging computing technologies through life-long learning.

II. PROGRAM OUTCOMES (POs)

PO 1: Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

- **PO 2:** Problem Analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO 3:** Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- **PO 4:** Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO 5:** Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO 6:** The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO 7:** Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO 8:** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO 9:** Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO 10:** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO 11:** Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO 12:** Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

III. PROGRAM SPECIFIC OUTCOMES (PSOs)

The graduates will be able to

- **PSO 1:** Apply the acquired knowledge to identify real-world research problems, using latest hardware and software tools, along with analytical skills to arrive at cost effective and appropriate solutions.
- **PSO 2:** Expose design and programming skills to develop intelligent systems for solving problems from inter-disciplinary domains.
- **PSO 2:** Develop themselves into professionals who are ready to serve the industry as well as society and to lead a product development company/team.

JERUSALEM COLLEGE OF ENGINEERING (AN AUTONOMOUS INSTITUTION AFFILIATED TO ANNA UNIVERSITY, CHENNAI) B.E. – COMPUTER SCIENCE AND ENGINEERING (ARTIFICIAL INTELLLIGENCE AND MACHINE LEARNING) CURRICULUM 2019 REGULATION – 2021 CHOICE BASED CREDIT SYSTEM

|----------|--|---|---|---|---|--|
| JII31121 | (Common to all B.E / B. Tech Programmes) | 2 | 0 | 2 | 3 | |

COURSE OBJECTIVES:

- To enable the students of Engineering and Technology to develop their listening skill by learning the key techniques for comprehending information
- To facilitate the learners to speak effectively while exchanging ideas in academic and social domains
- To develop their skills in reading and understanding texts through practice
- To expose them to the correct usage of language to develop their writing skill
- To train the students to use appropriate vocabulary in academic and technical writings

UNIT I BASIC GRAMMAR I AND READING FOR INFORMATION

Parts of speech - Sentence patterns – Tenses - Wh- questions - Yes/no questions - Countable and Uncountable nouns - Affixation – word formation; Reading short comprehension passages - practice in skimming and scanning for specific information and note-making, Critical reading - finding key information in a given text - shifting facts from opinions and paraphrasing

SOFT SKILLS LAB

Listening to documentaries, inspiring speeches of great leaders, news bulletins, Ted talks, telephonic conversations

UNIT II BASIC GRAMMAR I AND SHARING INFORMATION

Pronouns - Adjectives - Adverbs - Imperatives - Direct and indirect questions - Compound words - Guessing meaning of words in contexts – one word substitutes; Autobiographical writing (writing about one's leisure time activities, hometown, favourite place and school life) – Biographical writing (place, people), Letter writing (informal letters)

SOFT SKILLS LAB

Self-introduction, peer introduction, picture description, JAM

UNIT III BASIC GRAMMAR III AND FREE WRITING I

Conjunctions – Prepositions - Articles - Degrees of comparison – Discourse markers - Reference words; Process description, Coherence and cohesion in writing cause and effect / compare & contrast / narrative / analytical paragraphs

SOFT SKILLS LAB

Language functions: Giving reasons, talking about future plans, comparing and contrasting, making

9

3

9

3

3

suggestions.

UNIT IV BASIC GRAMMAR IV AND LANGUAGE DEVELOPMENT

Subject-verb agreement - Modal verbs - Phrasal verbs - Single word substitutes - Use of abbreviations & acronyms - Cloze reading - Interpreting visual material, Jumbled sentences 3

SOFT SKILLS LAB

Interpersonal Skills: role play, group discussion, debate, conduct of meeting

UNIT V BASIC GRAMMAR V AND FREE WRITING II

Clause - Direct and indirect speech - Correction of errors - Word association (connotations) -Lexical items (fixed / semi fixed expressions) - Essay writing - different types of essays, dialogue writing 3

SOFT SKILLS LAB

Creative writing and speaking skills: Poster making and description, project proposals

TOTAL: 60 PERIODS

9

9

COURSE OUTCOMES:

At the end of the course, students will be able to

- Listen to different talks and lectures and understand them easily
- Communicate their thoughts confidently using communicative strategies
- Read and grasp different genres of texts effortlessly
- Write grammatically correct academic, business and technical texts
- Apply the language skills efficiently in all forms of communication

MATRICES AND MULTIVARIATE CALCULUS **JMA1102** (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 2 | 2 | 0 | 3 |

12

12

COURSE OBJECTIVES:

- To equip students with the knowledge of matrices required for applications in engineering.
- To familiarize students in the applications of numerical methods to eigenvalue problems and to introduce matrix decomposition.
- To enable students to understand the concepts of multivariable functions and its calculus.
- To introduce concepts of integral calculus as tools required for applications in engineering.
- To familiarize students in the concepts of vector calculus and its applications.

UNIT I MATRICES

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors - Cayley-Hamilton theorem - Diagonalization of matrices by orthogonal transformations – Reduction of a quadratic form to canonical form - Nature of quadratic forms.

UNIT II EIGENVALUE PROBLEMS AND MATRIX DECOMPOSITION 12

Eigenvalue problems: Power method, Jacobi rotation method - Cholesky decomposition - QR decomposition – LU decomposition – Singular value decomposition.

UNIT III FUNCTIONS OF SEVERAL VARIABLES

Partial differentiation – Total derivative – Jacobians – Taylor's series for functions of two variables - Maxima and minima of functions of two variables - Lagrange's method of undetermined multipliers.

UNIT IV APPLICATIONS OF INTEGRAL CALCULUS

Improper integrals: Beta and Gamma Integrals – Definitions and properties – Simple problems. Multiple integrals: Double integrals over general regions – Cartesian coordinates – Polar coordinates - Change of order of integration - Change of variables - Area enclosed between plane curves -Triple integrals – Volume of solids.

UNIT V VECTOR CALCULUS

Vector Differentiation: Gradient and directional derivative - Divergence and curl - Vector identities - Irrotational and Solenoidal vector fields.

Vector Integration: Line and surface integrals - Green's theorem - Gauss and Stoke's theorems -Verification and evaluation in simple problems.

COURSE OUTCOMES:

At the end of the course, students will be able

CO1: To understand applications of matrix theory in quadratic forms.

CO2: To use numerical methods for solving eigenvalue problems and to perform various matrix

12

TOTAL: 60 PERIODS

decompositions.

CO3: To use calculus for problems and applications dealing with functions of several variables.

CO4: To gain insight on the applications of multiple integrals in area and volume problems.

CO5: To understand concepts of vector calculus and evaluate line and surface integrals.

ENGINEERING PHYSICS (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES:

- To enable the students to understand the basics in crystals structure
- To enable the students to understand the basic concepts in properties of matter
- To impart knowledge in ultrasonic inspections
- To introduce the principles of quantum mechanics
- To impart knowledge of laser and fiber optic communication

UNIT I CRYSTAL PHYSICS

Single crystal, Polycrystalline and Amorphous materials – Single Crystals: Unit cell, Crystal systems, Bravais lattices, Directions and Planes in a crystal, Miller indices - Inter planar distances -Coordination number and Packing factor for SC, BCC, FCC, HCP and Diamond structures - Crystal imperfections: Point defects, Line defects – Burgers vector, Stacking faults

PROPERTIES OF MATTER UNIT II

Elasticity - Stress-strain diagram and its uses - factors affecting elastic moduli and tensile strength torsional stress and deformations - twisting couple - torsion pendulum: theory and experiment bending of beams - stress due to bending in beams - bending moment - cantilever: theory and experiment - uniform and non-uniform bending: theory and experiment

UNIT III ULTRASONICS

Production of ultrasound by Magneto-striction effect and Piezoelectric effect Detection of ultrasonic wave - Properties of ultrasonic wave - Acoustic grating - Industrial applications - Drilling, Welding, Soldering and Cleaning - SONAR - Non Destructive Testing - Pulse echo system through Transmission and Reflection modes- A, B and C-scan displays.

UNIT IV PHOTONICS AND FIBRE OPTICS

Spontaneous and stimulated emission-Population inversion -Einstein's A and B coefficients derivation - Laser Principle - Semiconductor lasers (homojunction & heterojunction) - Optical Fiber: types (material, refractive index, mode) - Propagation of light in optical fibers - Numerical aperture and Acceptance angle -attenuation, dispersion, bending -Fiber Optical Communication system (Block diagram) -Active and passive fiber sensors-Endoscope.

UNIT V QUANTUM PHYSICS

Black body radiation –Planck's theory (derivation) –Deduction of Wien's displacement law and Rayleigh – Jeans' Law from Planck's theory – Compton effect-theory – Properties of Matter waves – G.P Thomson experiment -Schrödinger's wave equation –Time independent and time dependent equations -Physical significance of wave function -Particle in a one dimensional box -Scanning electron microscope -Transmission electron microscope

TOTAL: 45 PERIODS

9

9

9

9

COURSE OUTCOMES:

Students will be able

- To enhance knowledge on properties of matter
- To assess the properties of ultrasonics and imaging devices
- To understand and to compute problems in Quantum Physics.
- To learn the use of modern optical fiber communication systems and tools in real life applications.
- To gain more insight on the functioning of optical materials for optoelectronics.

Q

9

9

COURSE OBJECTIVES

- To acquaint the student with concepts of photochemistry and analytical techniques.
- To make the students conversant with boiler feed water and water treatment techniques.
- To make the students acquire sound knowledge in corrosion of materials.
- To understand polymer chemistry and the principle of energy in batteries.
- To impart knowledge on the basics of nano materials and engineering materials.

UNIT I: PHOTOCHEMISTRY AND ANALYTICAL TECHNIQUES

Photochemistry- Laws of photochemistry - Grotthuss–Draper law, Stark–Einstein law and Lambert-Beer Law (problems). Photo processes - Internal Conversion, Inter-system crossing, Fluorescence and its applications in medicine – Phosphorescence-Chemiluminescence and Photo-sensitization. Analytical Techniques – UV-visible spectroscopy – principles – instrumentation (block diagram only) – Colorimetry- Principle-Instrumentation, estimation of iron by colorimetry – Flame photometry – principle – Instrumentation – estimation of sodium by Flame photometry.

UNIT II WATER TECHNOLOGY

Hardness-Units of Hardness- Temporary hardness-Permanent hardness- Estimation hardness by EDTA method- Alkalinity – Types- water quality parameters (pH, EC, TDS, DO, BOD, COD) – Boiler feed water-requirements- boiler troubles (scale and sludge- caustic embrittlement-boiler corrosion-priming and foaming) - softening of hard water -external treatment (zeolite and demineralization) - internal treatment (phosphate, calgon, carbonate, colloidal) -- desalination of brackish water –reverse osmosis.

UNIT III ELECTROCHEMISTRY AND CORROSION

Electrochemistry- Electrochemical cell - redox reaction, electrode potential- oxidation potentialreduction potential, measurement and applications - electrochemical series and its significance -Nernst equation (derivation and problems).

Corrosion- causes- types-chemical, electrochemical corrosion- galvanic corrosion-differential aeration corrosion (pitting, waterline, wire fence, pipeline, crevice, stress corrosion), Factors influencing the rate of corrosion- corrosion control - material selection and design aspects – cathodic protection methods (sacrificial anode and impressed current cathodic methods)- Electroplating of Copper and electroless plating of nickel-corrosion inhibitors (anodic and cathodic inhibitors).

UNIT IV POLYMER, COMPOSITES AND ENERGY STORAGE DEVICES

Introduction- Classification of polymers – Natural and synthetic; Thermoplastic and Thermosetting. Functionality – Degree of polymerization.. Biodegradable polymer- Types- synthetic methods – applications of biodegradable polymers. Polymer composites and its application.

Energy Storage Devices - Batteries and fuel cells: Types of batteries – primary battery (dry cell) secondary battery (lead acid battery, nickel-cadmium battery, lithium-ion-battery). Fuel cell – H_2 - O_2 fuel cell- solid oxide fuel cell - polymer electrolyte membrane fuel cell (PEMFC) applications.

UNIT V ENGINEERING MATERIALS AND NANOCHEMISTRY

Engineering Materials- Refractories – classification – acidic, basic and neutral refractories – properties (refractoriness, refractoriness under load, dimensional stability, porosity, thermal spalling) – manufacture of alumina, magnesite and zirconia bricks. Cement – manufacture and properties - setting and hardening of cement, special cement- waterproof and white cement–properties and uses.

Nanochemistry – Introduction – distinction between molecules, nanoparticles and bulk materials; Synthesis: precipitation, thermolysis, hydrothermal, solvothermal, electrodeposition, chemical vapour deposition, laser ablation; Properties and applications.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Students will be able to

- Understand laws of photochemistry and principles of instrumentation and their applications in various fields.
- To understand the basic principle of water treatment and techniques involved in the purification process for future learning.
- Apply electrochemical reactions on the process of corrosion and its prevention methods.
- Gain knowledge on biodegradable polymers and understand the principle of batteries for development of new energy resources.
- Gain knowledge on engineering materials and understand the unique behavior of nanomaterials.

COURSE OBJECTIVES

- To impart knowledge on the basics of Civil Engineering to the students.
- To impart knowledge on the basics of Mechanical Engineering to the students.
- To impart knowledge on the electric circuits and working principles of Electrical Machines.
- To impart knowledge on the Principles and characteristics of various electronic devices.
- To impart knowledge on the basics of various measuring instruments.

UNIT 1 BASICS OF CIVIL ENGINEERING

Introduction to Civil Engineering, Types of buildings, components of a residential building, Building Materials, Types of slabs, beam, column, lintel, floor and foundation - Types of roofs.

Surveying and Levelling - Linear and Angular Measurements - Introduction to transport system, role of transportation in society - Green Highway.

Sources of water, Hydrological cycle, Irrigation Engineering, Rain water harvesting, Environmental pollution, Greenhouse gas emission, Ozone depletion, Global warming - Green building concepts.

UNIT 2 BASICS OF MECHANICAL ENGINEERING

Introduction to the concepts of Mechanization and Automation, Robotics - Manufacturing methods casting, machining, forming operations, Introduction to IC Engine - Working principles of four stroke petrol and diesel engines, Types of power plants - Hydel power plant and thermal power plant, Steam generators - Fire tube boiler and water tube boiler, Thermal systems - Heat exchangers, Radiator and oil cooler, Design of ingenious mechanisms - Parts feeding mechanism.

UNIT 3 ELECTRIC CIRCUITS AND ELECTRICAL MACHINES

Basic circuit components - Ohms Law - Kirchhoff's Law-Introduction to AC circuits-waveforms and RMS value - Power and power factor-Principles of operation and characteristics of DC machines-Transformers-Three phase and single-Phase induction motors.

UNIT 4 ELECTRONIC DEVICES & CIRCUITS

Types of Materials - Silicon & Germanium - N type and P type materials - Construction and Characteristics: PN Junction diode - Zener Diode - Bipolar Junction Transistor - Field effect Transistors - IGBT - Introduction to operational amplifier - Inverting Amplifier - Non-inverting Amplifier.

UNIT 5 MEASUREMENTS & INSTRUMENTATION

Elements of generalized measurement system - Basic terminologies: Accuracy, precision, resolution, sensitivity, linearity, span and range - Errors in measurement - Standards of measurement - calibration - Operating forces: Deflection force, controlling force, damping force - Classification of instruments.

TOTAL: 45 PERIODS

11

11

7

7

COURSE OUTCOMES

The students will be able to

- Gain knowledge on the various fields of Civil Engineering.
- Know the fundamentals of Mechanical Engineering.
- Understand the basic concepts of electric circuits and working principles of electrical machines.
- Gain knowledge on the basics of electronics and apply them in practical situations.
- Choose appropriate instruments for electrical measurement for a specific application.

PROGRAMMING IN C (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES

- To learn Fundamentals of computing
- To be able to use file operations in C
- To implement programs using basic features of C
- To learn to use C pointers and dynamically allocated memory techniques
- To learn advanced features of the C programming language

UNIT I INTRODUCTION TO PROBLEM SOLVING

Simple model of a Computer - Hardware - Software - Data Representation, Problem Solving Techniques – Bottom up design and top down design - applications, Introduction to Algorithms and Flow Chart - Notion of memory, addresses, variables, instructions, execution of instruction- Operating system commands, file editing, compiling, linking, executing a program.

UNIT II C PROGRAMMING

Introduction to 'C' programming – structure of a 'C' program – compilation and linking processes. Conversion of simple algorithm to program-Constants, Variables – Data Types – Expressions using operators in 'C' - Managing Input and Output operations - Decision Making and Branching -Looping statements – solving simple scientific and statistical problem.

UNIT III ARRAYS AND STRINGS

Arrays - Initialization - Declaration - One dimensional and two dimensional arrays - String- String operations –Arrays of strings.

UNIT IV FUNCTIONS AND USER DEFINED DATA TYPES

Function - definition of function - Declaration of function - Pass by value - Pass by reference-Command Line Argument in C-- Recursion - Enumerators - Structures - Unions.

UNIT V POINTERS AND FILES

Macros - storage classes - Pointers- Definition - Initialization - Pointers arithmetic - Double Pointers, Basic file operations-Example problems.

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Design and represent solutions to problems as algorithm and flow chart
- Write simple C Programs using loops and conditional statements
- Write simple C Programs using arrays
- Write simple C Programs using functions
- Write simple C codes using pointers, structures and union

JPC1111 PHYSIC

PHYSICS AND CHEMISTRY LABORATORY (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 0 | 0 | 2 | 1 |

COURSE OBJECTIVES:

• To provide students the firsthand experience of verifying various concepts learnt in theory courses.

LIST OF EXPERIMENTS:

PHYSICS

- 1. Determination of Young's modulus for the given uniform bar by uniform bending method
- 2. Determination of wavelength of the diode laser and hence determine the size of the coated powder particle
- 3. Determination of velocity of Ultrasound using Ultrasonic interferometer and also find the compressibility of the given liquid
- 4. Determination of moment of inertia of the given circular disc and rigidity modulus of the metal wire using torsional pendulum
- 5. Determination of Planck' constant using different color filters
- 6. Determination of Wavelength of spectral lines in mercury spectrum using spectrometer
- 7. Analysis of I-V Characterization of Solar cell

TOTAL: 15 PERIODS

LIST OF EXPERIMENTS

CHEMISTRY

- 1. Estimation of HCl using Na₂CO₃ as primary standard and determination of alkalinity in water samples.
- 2. Determination of total, temporary & permanent hardness of water by EDTA method.
- 3. Determination of DO content of water sample by Winkler's method.
- 4. Determination of chloride content of water sample by argentometric method.
- 5. Estimation of copper in brass by Iodometry.
- 6. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.

TOTAL: 15 PERIODS

COURSE OUTCOMES:

Students will be able to

- 1. Acquire experience in analyzing the elastic materials.
- 2. Understand the acoustic properties of various liquids.
- 3. Acquire knowledge in optical properties of solids.
- 4. Make the student acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- 5. Acquaint the students with the determination of molecular weight of a polymer by viscometry.

PROGRAMMING IN C LABORATORY (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 0 | 0 | 4 | 2 |

COURSE OBJECTIVES:

The students should be made to:

- To be exposed to the syntax of C
- To be familiar with programming in C
- To learn to use arrays, strings, functions, pointers, structures and unions in C.
- To Learn the fundamentals of File Programming in C
- To solve simple problems using C

LIST OF PROGRAMS

- 1. Usage of Basic Linux commands
- 2. C Programming using Simple statements and expressions
- 3. Scientific problem solving using decision making and looping.
- 4. Simple programming for one dimensional and two dimensional arrays.
- 5. Solving problems using Strings
- 6. C Programming using Pointers
- 7. C Programming using user defined functions (Pass by value and Pass by reference)
- 8. C Programming using Recursion
- 9. C Programming using structures and union
- 10. C Programming using enumerated data types
- 11. C Programming using macros and storage classes
- 12. C Programming using Files

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Write simple C Programs
- Able to solve scientific problems using C
- Gain knowledge on the use of functions and arrays
- Use structures, pointers and files in C Programs
- Develop modularized applications in C

TEXT BOOKS:

- 1. Pradip Dey, Manas Ghosh, "Programming in C As per the latest AICTE syllabus", First Edition, Oxford University Press, 2018.
- 2. Byron S Gottfried, "Programming with C", Schaum's Outlines, Third Edition, McGraw- Hill, 2010.

|---|---|---|---|
| 0 | 0 | 4 | 2 |

COURSE OBJECTIVES

- To provide exposure to the students with hands-on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.
- To kindle your own creativity, ideation and realize the importance of team working.
- To gain knowledge through experience in handling of engineering aggregates.
- To appreciate the use of various mechanisms involved in engineering products.
- To understand the interactions between its subsystems and their functionality.

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE

Buildings:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

- (a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
- (b) Study of pipe connections requirements for pumps and turbines.
- (c) Preparation of plumbing line sketches for water supply and sewage works.
- (d) Hands-on-exercise: Basic pipe connections Mixed pipe material connection Pipe connections with different joining components.
- (e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

- (a) Study of the joints in roofs, doors, windows and furniture.
- (b) Hands-on-exercise: Wood work, joints by sawing, planing and cutting.

MECHANICAL ENGINEERING PRACTICE

Welding:

- (a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
- (b) Gas welding practice

Basic Machining:

- (a) Simple Turning and Taper turning
- (b) Drilling Practice

Sheet Metal Work:

- (a) Forming & Bending:
- (b) Model making Trays and funnels.
- (c) Different type of joints.

Machine Assembly Practice:

- (a) Study of centrifugal pump
- (b) Study of air conditioner

18

Demonstration on:

- (a) Smithy operations, upsetting, swaging, setting down and bending. Example Exercise Production of hexagonal headed bolt.
- (b) Foundry operations like mould preparation for gear and step cone pulley.
- (c) Fitting Exercises Preparation of square fitting and V fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)

I ELECTRICAL ENGINEERING PRACTICE

- 1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
- 2. Fluorescent lamp wiring.
- 3. Stair case wiring
- 4. Measurement of electrical quantities voltage, current, power & power factor in RLC circuit.
- 5. Measurement of energy using single phase energy meter.
- 6. Measurement of resistance to earth of electrical equipment.

II ELECTRONICS ENGINEERING PRACTICE

- 1. Study of Electronic components and equipments Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.
- 2. Study of logic gates AND, OR, EX OR and NOT.
- 3. Generation of Clock Signal.
- 4. Soldering practice Components Devices and Circuits Using general purpose PCB.
- 5. Measurement of ripple factor of HWR and FWR.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

On successful completion of this course, the student will be able to

- Fabricate carpentry components and pipe connections including plumbing works.
- Illustrate on centrifugal pump, Air conditioner, operations of smithy, foundry and fittings.
- Carry out basic home electrical works and appliances.
- Measure the electrical quantities.
- Elaborate on the components, gates, soldering practices.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS: CIVIL

- 1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings. 15 Sets
- 2. Carpentry vice (fitted to work bench) 15 Nos
- 3. Standard woodworking tools 15 Sets
- 4. Models of industrial trusses, door joints, furniture joints 5 each
- 5. Power Tools:

(a)Rotary Hammer 2 Nos(b)Demolition Hammer 2 Nos(c)Circular Saw 2 Nos(d)Planer 2 Nos

16

- (e)Hand Drilling Machine 2 Nos
- (f) Jigsaw 2 Nos

MECHANICAL

- 1. Arc welding transformer with cables and holders 5 Nos
- 2. Welding booth with exhaust facility 5 Nos
- 3. Welding accessories like welding shield, chipping hammer, wire brushetc. 5 Sets
- 4. Oxygen and acetylene gas cylinders, blow pipe and other welding outfit. 2 Nos
- 5. Centre lathe 2 Nos
- 6. Hearth furnace, anvil and smithy tools 2 Sets
- 7. Moulding table, foundry tools 2 Sets
- 8. Power Tool: Angle Grinder 2 Nos
- 9. Study-purpose items: centrifugal pump, air-conditioner 1 each

ELECTRICAL

- 1. Assorted electrical components for house wiring 15 Sets
- 2. Electrical measuring instruments 10 Sets
- 3. Study purpose items: Iron box, fan and regulator, emergency lamp 1 each
- 4. Megger (250V/500V) 1 No
- 5. Power Tools:

(a)Range Finder 2 Nos

(b)Digital Live-wire detector 2 Nos

ELECTRONICS

- 1. Soldering guns 10 Nos
- 2. Assorted electronic components for making circuits 50 Nos
- 3. Small PCBs 10 Nos
- 4. Multimeters 10 Nos
- 5. Study purpose items: Telephone, FM radio, low-voltage power supply

SEMESTER II

JHS1221

TECHNICAL ENGLISH & SOFT SKILLS 2 (Common to all B.E / B.Tech Programmes)

| L | Т | P | С |
|---|---|---|---|
| 2 | 0 | 2 | 3 |

COURSE OBJECTIVES:

- To make the students of engineering and technology enhance their ability to read and comprehend different texts
- To improve their creative and critical thinking so as to use in demanding contexts
- To equip the learners with the skills of writing convincing job applications and effective reports
- To develop their speaking skills to make technical presentations and participate in group discussions
- To facilitate them to hone their soft skills

UNIT I TECHNICAL WRITING AND VISUAL CONVERSION

Definitions, Purpose statements, Technical vocabulary, regular and irregular verbs - Process Description and Interpretation of Graphs and Charts

SOFT SKILLS LAB

Skimming and scanning, understanding logic and sequencing in reading, inferring the exact meaning of text, making out meaning of pictorial and graphical representations

UNIT II TECHNICAL WRITING AND GUIDELINES PREPARATION

Conditional clauses, Numerical adjectives, Collocation, verbal analogies -Instructions, Recommendations, Checklist

SOFT SKILLS LAB

Comprehensive listening: Listening to telephonic conversations, listening to native accents, short and long conversations from different domains, listening to various pre-recorded conversations and speeches

UNIT III SOFT SKILLS LAB

Listening and speaking practice based on BEC, IELTS and TOEFL

UNIT IVTECHNICAL WRITING AND BUSINESS LETTERS

Cause and effect, impersonal passive voice, idioms and phrases, words used as nouns and verbs --Letter writing – job application, business correspondence (letters) - calling for quotations, placing order, complaint letters, preparing a memo, notice and e-mail – itinerary

SOFT SKILLS LAB

Group Discussions - Process, Skills, Guidelines, Evaluation, Oral Presentation – Planning, Preparing, Organizing, Presenting

3

6

6

3

6

9

UNIT VTECHNICAL WRITING AND REPORT WRITING

Degrees of comparison, editing, Email etiquette, Misspelled words -- Report writing: survey, feasibility, industrial visit, reporting various incidents and accidents, Minutes of meeting **SOFT SKILLS LAB** 3

Starting a Career – vision statement, preparing logo and tagline, making short term and long term goals, setting plans

TOTAL: 45 PERIODS

COURSE OUTCOMES:

On the completion of the course, students will be able to

- Read and understand general and technical texts
- Apply creative and critical thinking and communicate their ideas efficiently
- Participate in group discussions and deliver short speeches effectively
- Write effectively and persuasively in academic and workplace contexts
- Face the future challenges confidently and successfully

TEXTBOOKS:

- 1. Department of English, Anna University, Chennai. Mindscapes: English for Technologists and Engineers. Orient Black Swan, Chennai, 2012.
- 2. Dhanavel, S.P. English and Communication Skills for Students of Science and Engineering. Orient Black Swan Publications, Chennai, 2011.

JMA1202

| L | Τ | Р | С |
|---|---|---|---|
| 2 | 0 | 2 | 3 |

COURSE OBJECTIVES:

- To impart knowledge of consistency of system of equations through Rouche-Capelli theorem • and numerical techniques.
- To familiarize students in the concepts of vector spaces, bases and dimension.
- To help students understand concepts of linear transformation, Eigen values, Eigen vectors and Diagonalizability.
- To introduce inner product spaces, orthogonalization and least square approximations.

UNIT I MATRICES AND SYSTEM OF LINEAR EQUATIONS

Matrices - Row Echelon form - Reduced Row Echelon form - Rank - Non-homogeneous system of linear equations - Homogeneous system of linear equations - Rouche-Capelli theorem (without proof) - Consistency - Gauss Jordan method - Gauss Seidel method.

UNIT II VECTOR SPACES

Definition of field – Vector spaces – Subspaces – Properties – Linear combinations – Linear independence and linear dependence - Span - Bases and dimensions.

UNIT III LINEAR TRANSFORMATION

Linear transformation – Properties - Kernel and Image – One-to-One and Onto transformations – Rank and Nullity – Dimension theorem.

UNIT IV DIAGONALIZATION

Matrix representations of linear transformations - Eigenvalues and eigenvectors - Diagonalizability.

UNIT V INNER PRODUCT SPACES

Inner products and norms - Gram Schmidt orthogonalization process - Adjoint of a linear operator -Least square approximation.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able

CO1: To understand applications of Rouche-Capelli theorem and numerical methods in system of equations.

CO2: To apply fundamentals concepts of advanced algebra in modern mathematics.

CO3: To understand concepts and methods in Linear transformations.

CO4: To demonstrate efficient use of matrix representations and diagonalization.

CO5: To solve problems using orthogonalization process and use least square approximations in engineering applications.

APPLIED SCIENCE FOR ELECTRONICS AND INFORMATION ENGINEERING

| L | Т | Р | С |
|---|---|---|---|
| 2 | 0 | 2 | 3 |

COURSE OBJECTIVES

- To understand the essential principles of semiconductor device and Electron transport properties.
- To understand the essential principles of magnetic properties of materials.
- To understand the essential principles of optical properties of materials.
- To compare the basic concepts of hybridization with chemical bonding.
- To understand the principles in various analytical techniques.

UNIT I SEMICONDUCTING MATERIAL

Intrinsic semiconductor – Carrier concentration – Fermi level – Variation of Fermi level with temperature – Electrical conductivity – Band gap determination – Compound semiconductors -Direct and Indirect band gap- Carrier concentration in N-type and P-type semiconductor – Variation of Fermi level with temperature and Impurity concentration.

UNIT II MAGNETIC AND SUPERCONDUCTING MATERIALS

Origin of magnetic moment – Bohr magneton – comparison of Dia, Para and Ferro magnetism – Domain theory – Hysteresis – Soft and Hard magnetic materials– Ferrites and its applications - Superconductivity: properties – Type I and Type II superconductors – BCS theory of superconductivity (Qualitative) – High Tc superconductors .

UNIT III OPTICAL PROPERTIES OF MATERIALS

Classification of Optical materials - metals, insulators and semiconductors) – Carrier generation and Recombination processes - Absorption emission and Scattering of light (concepts only) - Photo current in a P-N diode – Solar cell - LED – Organic LED.

UNIT IV CHEMICAL BONDING AND CONDUCTIVITY IN SOLIDS

Band theory - Salient feature-Application of band theory (conductor, semiconductor, insulator)-Semiconductor- Types (intrinsic and extrinsic) - Band energy levels for pure silicon crystal, band model of n-type and p-type semiconductance of silicon. Types - Nonelemental semiconductor, Defect semiconductor, Chalcogen semiconductor (definition, properties). Preparation of Germanium-Fractional distillation and crystal growth methods. Fullerenes-preparation, properties and applications. Conducting polymer-Types-mechanism of conduction (polyacetylene) - polyaniline properties, applications.

UNIT V INSTRUMENTAL METHODS OF ANALYSIS

Thermal analysis techniques- Thermo gravimetric analysis and Differential thermal analysis-Principle, instrumentation and applications - Concept of chromatography – Principle, instrumentation and applications of Paper chromatography, Column chromatography, Thin layer chromatography and Gas chromatography. Principle and applications of Conductometric titrations, Potentiometric titrations and pH-metry.

7

7

7

10

PHYSICS LABORATORY

LIST OF EXPERIMENTS: (ANY 5)

- 1. Determination of dispersive power of the given solid prism using spectrometer
- 2. Determination of thickness of the given thin material by forming interference fringes using air- wedge setup
- 3. Analysis of I-V Characterization of Solar cell
- 4. Determination of energy gap of the given semiconductor by plotting the graph between current and temperature
- 5. Determination of acceptance angle of the given fiber cable.
- 6. Determination of Young's modulus for the given uniform bar by nonuniform bending method

CHEMISTRY LABORATORY

LIST OF EXPERIMENTS (ANY 5)

- 1. Determination of strength of hydrochloric acid using pH meter.
- 2. Determination of strength of acids in a mixture of acids using conductivity meters.
- 3. Conductometric titration of strong acid vs strong base.
- 4. Estimation of iron content using potentiometer.
- 5. Estimation of iron content of the water sample using spectrophotometer (thiocyanate method).
- 6. Estimation of sodium and potassium present in water using a flame photometer.
- 7. Determination of SAP and FAV values of an oil.
- 8. Estimation of acetic acid adsorbed on charcoal

TOTAL: 60 PERIODS

COURSE OUTCOMES

At the end of the course, the students will able to

- Acquire knowledge on basics of conductivity of solids, semiconductor physics and its applications in various devices.
- Get knowledge on magnetic properties of materials and their applications in data storage
- Have the necessary understanding on the functioning of optical materials for
- Optoelectronics Acquainted with hands-on knowledge in the quantitative chemical analysis through instrumental analysis
- Acquire practical knowledge on interference pattern, semiconductor devices, solar cells and instrumental analysis of acids, bases and heavy metals.

PYTHON PROGRAMMING

(Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES

- To provide an introduction to Python Programming Language.
- To understand the decision making and looping concepts.
- To understand functions, strings and list in Python.
- To understand tuples, dictionaries and files.
- To know the exception handling and 2D concepts.

INTRODUCTION TO PYTHON UNIT I

History of Python, Features, Installing Python, Running Python Program, Interactive mode programming, Script Mode Programming, Identifiers, Reserved Words, Indentation, Comments, Variables, Data Types, Data Type Conversion

UNIT II **DECISION MAKING AND LOOPING**

Python Operators, Operator Precedence, Decision Making: if Statement, if else Statement, if elif else Statement, nested if Statement, Loops: while loop, for loop, nested loops; Loop Control Statements: continue Statement, break Statement, pass Statement: Iterator and Generator

UNITII FUNCTIONS, STRING, LIST

Functions: Pre defined Functions, User defined Functions, Recursion, Lambda Function; String: Functions, methods, modules; Lists: Operations, pre-defined functions, advanced list processing; Packages

UNIT IV **TUPLES, DICTIONARY, FILES**

Tuples: Tuple Operations and methods, Dictionary: Dictionary Operations and methods; Files: Text Files, Reading and writing Files; Format Operator, Command line argument

EXCEPTION HANDLING AND GRAPHICS UNIT V

Date & Time Methods, Exception handling clauses, Raising an Exception, User Defined Exception; Simple graphics and image processing, simple 2D drawing - colors and shapes.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

At the end of the course, the student will be able to

- Understand the evolution of Python and run basic python programs.
- Structure simple python programs for solving programs.

9

9

9

9

- Decompose larger programs into functions.
- Understand compound structures like list, tuple, and dictionary.
- Learn basic 2D graphics concepts in Python.

JGE1202 ENGINEERING GRAPHICS AND DESIGN (Common to all B.E / B.Tech. Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 1 | 0 | 4 | 3 |

COURSE OBJECTIVES

- To understand the importance of graphics in engineering
- To develop skills in preparation of basic drawing
- To improve their technical communication skill in the form of communicative drawing
- To impart knowledge about standard principle of orthographic projection of objects.
- To improve their visualization skills for developing new products.

UNIT I PLANE CURVES AND ORTHOGRAPHIC PROJECTION

Conics - Construction of ellipse, Parabola and hyperbola by eccentricity method - Construction of cycloid - construction of involutes of squad and circle - Drawing of tangents and normal to the above curves. Representation of Three Dimensional objects - General principles of orthographic projection - Need for importance of multiple views and their placement - First angle projection - layout views - Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES 15

Projection of points and straight lines located in the first quadrant - Determination of true lengths and true inclinations - Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT III PROJECTION OF SOLIDS

Projection of simple solids like prisms, pyramids, cylinders and cones when the axis is inclined to one reference plane by change of position method.

UNIT IV SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES 15

Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other - Obtaining true shape of section.

Development of lateral surfaces of simple and truncated solids - Prisms, pyramids, cylinders and cones - Development of lateral surfaces of solids with cylindrical cut-outs and square cut-outs, perpendicular to the axis.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones. Perspective projection of prisms, pyramids and cylinders by visual ray method.

TOTAL: 75 PERIODS 40

15

15

COURSE OUTCOMES:

On successful completion of this course, the student will be able to

- Familiarize with the fundamentals and standards of engineering graphics.
- Perform free hand sketching of basic geometrical constructions and multiple views of objects.
- Project orthographic projections of lines and plane surfaces.
- Draw projection of solids and development of surfaces.
- Interpret isometric and perspective view of objects.

DIGITAL LOGIC FUNDAMENTALS (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES:

- To design digital circuits using simplified Boolean functions
- To analyze and design combinational circuits •
- To analyze and design synchronous sequential circuits
- To analyze and design asynchronous sequential circuits
- To understand Memory and Programmable Logic Devices

UNIT I BOOLEAN ALGEBRA AND LOGIC GATES

Number Systems - Arithmetic Operations - Binary Codes- Boolean Algebra and Logic Gates - Theorems and Properties of Boolean Algebra - Boolean Functions - Canonical and Standard Forms - Simplification of Boolean Functions using Karnaugh Map - Logic Gates - NAND and NOR Implementations.

UNIT II COMBINATIONAL LOGIC

Combinational Circuits - Analysis and Design Procedures - Binary Adder-Subtractor -Decimal Adder - Binary Multiplier - Magnitude Comparator - Decoders - Encoders -Multiplexers.

UNIT III SYNCHRONOUS SEQUENTIAL LOGIC

Sequential Circuits - Storage Elements: Latches, Flip-Flops - Analysis of Clocked Sequential Circuits - State Reduction and Assignment - Design Procedure - Registers and Counters.

UNITIV ASYNCHRONOUS SEQUENTIAL LOGIC

Analysis and Design of Asynchronous Sequential Circuits - Reduction of State and Flow Tables – Race-free State Assignment – Hazards.

UNIT V MEMORY AND PROGRAMMABLE LOGIC

RAM - Memory Decoding - Error Detection and Correction - ROM - Programmable Logic Array – Programmable Array Logic – Sequential Programmable Devices.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

On Completion of the course, the students should be able to:

- Simplify Boolean functions using KMap
- Design and Analyze Combinational and Sequential Circuits

43

12

12

12

12

- Design and Analyze synchronous sequential circuits
- Analyze and design asynchronous sequential circuits
- Implement designs using Programmable Logic Devices

JNC1261

ENVIRONMENTAL SCIENCE (Common to all B.E / B.Tech Programmes)

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 0 |

COURSE OBJECTIVES

- To study the interrelationship between living organism and environment.
- To finding and implementing scientific, technological to environmental problems due to pollution.
- To study about various natural resources and the individual responsibility to conserve it.
- To study on the social issues over environment.
- To get knowledge on population explosion, human rights and value education.

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids - Nitrogen Cycle, Oxygen Cycle, Carbon Cycle, Phosphorous Cycle. Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – value of biodiversity- threats to biodiversity– conservation of biodiversity.

UNIT II ENVIRONMENTAL POLLUTION

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – climate change, global warming, acid rain, ozone layer depletion.

UNIT III NATURAL RESOURCES

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and overutilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources- effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity. Energy resources: renewable and non renewable energy sources, Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources.

9

9

UNIT V SOCIAL ISSUES AND THE ENVIRONMENT

Urban problems related to energy – water conservation- rain water harvesting, watershed management – resettlement and rehabilitation of policy. – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

Human population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of course completion, students will be able to

- Explain about ecosystem, their structure and function to conserve biodiversity.
- Recognize the level of environmental pollution and their control measures.
- Explain about the various types of natural resources and role of a human being in maintaining a clean sustainable environment for the future generations.
- Identify the social problems in the environment to reduce social issues.
- Understand environment and human health human rights value education, and the role of information technology in environment and human health.

| JEC1209 | HERITAGE OF TAMILS | 2 | 0 | 0 | 1 |

UNIT I LANGUAGE AND LITERATURE

Language Families in India - Dravidian Languages – Tamil as a Classical Language – Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

UNIT II HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE 3

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

UNIT III FOLK AND MARTIAL ARTS

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

UNIT IV THINAI CONCEPT OF TAMILS

3

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

UNIT V CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT 3 AND INDIAN CULTURE

Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

JGE1211

PYTHON PROGRAMMING LABORATORY (Common to all B.E / B.Tech Programmes)

| L | Т | P | С |
|---|---|---|---|
| 0 | 0 | 4 | 2 |

COURSE OBJECTIVES

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples and dictionaries.
- To implement basic 2D diagrams.

LIST OF PROGRAMS

- 1. Compute the GCD of two numbers.
- 2. Find the square root of a number (Newton's method)
- 3. Exponentiation (power of a number)
- 4. Find the maximum of a list of numbers
- 5. Guess an integer number in a rang
- 6. Insert a card in a list of sorted cards.
- 7. Multiply matrices
- 8. Programs that take command line arguments (word count)
- 9. Find the most frequent words in a text read from a file
- 10. Create an User defined Exception
- 11. Draw a 2D circle and square

TOTAL: 60 PERIODS

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux

COURSE OUTCOMES:

At the end of the course, the student will be able to

- Write, test, and debug simple Python programs.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples, dictionaries for representing compound data.
- Draw 2D graphic diagrams in Python.

DIGITAL LOGIC FUNDAMENTALS LABORATORY

| L | Т | Р | С |
|---|---|---|---|
| 0 | 0 | 4 | 2 |

COURSE OBJECTIVES:

- To understand the various basic logic gates
- To design and implement the various combinational circuits
- To design and implement combinational circuits using MSI devices.
- To design and implement sequential circuits

LIST OF EXPERIMENTS

- 1. Verification of Boolean Theorems using basic gates.
- 2. Design and implementation of combinational circuits using basic gates for arbitrary functions, code converters.
- 3. Design and implement Half/Full Adder and Subtractor
- 4. Design and implement combinational circuits using MSI devices:
 - 4 bit binary adder / subtractor
 - Parity generator / checker
 - Magnitude Comparator
- 5. Application using multiplexers
- 6. Design and implement shift-registers.
- 7. Design and implement synchronous counters.
- 8. Design and implement asynchronous counters.
- 9. Design and implementation of a simple digital system (Mini Project).

TOTAL: 60 PERIODS

COURSE OUTCOMES:

- Upon Completion of the course, the students will be able to:
- Implement simplified combinational circuits using basic logic gates
- Implement combinational circuits using MSI devices
- Implement sequential circuits like registers and counters

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:

- 1. Digital trainer kits 30
- 2. Digital ICs required for the experiments in sufficient numbers

SEMESTER III

JMA1304

DISCRETE MATHEMATICS FOR COMPUTER SCIENCE

L T P C 2 2 0 3

COURSE OBJECTIVES:

- To equip students with the ability to deal with abstraction by way of propositional logic.
- To familiarize students in combinatorial problems and its applications.
- To develop the ability to apply the concepts of Fuzzy logic.
- To introduce fundamental concepts in number theory and its applications.
- To conceptualize congruence, its applications and standard theorems.

UNIT I LOGIC AND PROOFS

Propositional logic – Propositional equivalences - Predicates and quantifiers – Nested quantifiers – Rules of inference - Introduction to proofs – Proof methods and strategy.

UNIT II COMBINATORICS

Mathematical induction – Strong induction and well ordering – The basics of counting – The pigeonhole principle – Permutations and combinations – Recurrence relations – Solving linear recurrence relations – Generating functions – Inclusion and exclusion principle and its applications.

UNIT III FUZZY LOGIC

Fuzzy sets – Properties and Operations – Fuzzy relations – Operations on Fuzzy relations - Classical logic – Multivalued logic – Fuzzy propositions – Fuzzy quantifiers.

UNIT IV DIVISIBILITY THEORY AND CANONICAL DECOMPOSITIONS 12

Division algorithm – Base-b representations – Number patterns – Prime and composite numbers – GCD – Euclidean algorithm – Fundamental theorem of arithmetic – LCM - Linear Diophantine equations.

UNIT V CONGRUENCES AND CLASSICAL THEOREMS

Congruences – Linear Congruences - Applications: Divisibility tests - Modular exponentiation - Chinese remainder theorem – 2×2 linear systems - Wilson's theorem – Fermat's little theorem – Euler's theorem – Euler's Phi functions – Tau and Sigma functions.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able

CO1: To understand propositional logic and various proof methods and strategy.

- CO2: To use counting principles and mathematical induction in solving combinatorial problems.
- CO3: To understand applications of multivalued logic and fuzzy logic in problems.

CO4: To understand divisibility theory and canonical decompositions of number theory.

CO5: To solve simple problems using classical theorems of number theory.

DATA STRUCTURES AND ALGORITHMS $\frac{2}{3}$

COURSE OBJECTIVES

JCB1301

- To understand the concepts of ADTs
- To design linear data structures lists, stacks, and queues
- To learn the non–linear data structure trees and its types.
- To understand the concepts of graphs and its applications.
- To understand sorting, searching, and hashing algorithms

UNIT I ABSTRACT DATATYPE

Abstract Data Types (ADTs) – ADTs and classes – Introduction to analysis of algorithms – asymptotic notations – divide & conquer – recursion – analyzing recursive algorithms

UNIT II LINEAR STRUCTURE

List ADT – array-based implementations – linked list implementations – singly linked lists – circularly linked lists – doubly linked lists – Stack ADT – Queue ADT – double ended queues –applications.

UNIT III TREE STRUCTURE

Tree ADT – Binary Tree ADT – tree traversals – binary search trees – AVL trees – heaps – multi- way search trees.

UNITIV GRAPH STRUCTURES

Graph ADT – representations of graph – graph traversals – DAG – topological ordering – greedy algorithms – dynamic programming – shortest paths – minimum spanning trees.

UNITV SORTING AND SEARCHING

Bubble sort – selection sort – insertion sort – merge sort – quick sort – analysis of sorting algorithms– linear search – binary search – hashing – hash functions – collision handling – load factors, rehashing, and efficiency

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Explain abstract data types
- Design, implement, and analyze linear data structures, such as lists, queues and stacks, according to the needs of different applications.
- Design, implement, and analyze efficient tree structures to meet requirements such as searching, indexing, and sorting.
- Model problems as graph problems and implement efficient graph algorithms to solve them.

TOTAL: 45 PERIODS

COURSE OBJECTIVES

- To study the different of aware process models and developments
- To learn the fundamental concepts of requirements engineering and Analysis Modeling
- To analyze and apply the various software design methodologies
- To acquire knowledge in various testing methodologies and tools
- To attain the knowledge in Project Management process

UNIT I SOFTWARE PROCESS AND AGILE DEVELOPMENT

Introduction to Software Engineering – The Software Process – Perspective and Specialized Models – Agile Development–Introduction to Agility-Agile Process- Extreme programming - XP Values – XP Process.

UNIT II REQUIREMENTS ANALYSIS AND SPECIFICATION

Software Requirement – Functional and Non-Functional – User requirements –System requirements Software Requirements Document–Requirement Engineering Process– Feasibility Studies Requirements elicitation and Analysis–Requirement Negotiation– Requirements Validation Requirements Management-Classical analysis–Structured system Analysis– Data Dictionary.

UNIT III SOFTWARE DESIGN

Design process – Design Concepts–Design Model–Design Heuristic – Architectural Design Architectural Styles – Architectural Mapping using Data Flow - User Interface Design – Interface analysis – Interface Design – Component level Design – Designing Class based components - Traditional Components.

UNIT IV TESTING AND MAINTENANCE

Software Testing Fundamentals -White box Testing – Basis Path Testing-Control Structure Testing Black Box Testing – Regression Testing – Unit Testing – Integration Testing – Validation Testing System Testing–Testing tools– Reengineering Process Model - Reverse and Forward Engineering.

UNIT V PROJECT MANAGEMENT

Software Project Management – Estimation – LOC – FP Based Estimation – Make/Buy Decision COCOMO I & II Model – Project Scheduling – Earned Value Analysis Planning – Project Plan Planning Process – RFP Risk Management – Identification – Projection – Risk Mitigation RMMM Plan-CASE Tool

9

COURSE OBJECTIVES:

- To understand the data science fundamentals and process.
- To learn to describe the data for the data science process.
- To learn to describe the relationship between data.
- To utilize the Python libraries for Data Wrangling.
- To present and interpret data using visualization libraries in Python.

UNIT I INTRODUCTION TO DATA SCIENCE

Data Science: Benefits and uses – Facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation - Exploratory Data analysis – Build the model – Presenting findings and building applications - Basic Statistical descriptions of Data.

UNIT II DESCRIPTIVE STATISTICS - DESCRIBING DATA

Types of Data - Types of Variables - Describing Data with Tables and Graphs – Describing Data with Averages - Describing Variability - Normal Distributions and Standard (z) Scores.

UNIT III DESCRIPTIVE STATISTICS - DESCRIBING RELATIONSHIPS

Correlation – Scatter plots – Correlation coefficient for quantitative data – Computational formula for correlation coefficient. Regression – A regression line – Least squares regression line – Standard error of estimate – Interpretation of r^2 – Multiple regression equations – Regression towards the mean.

UNIT IV PYTHON LIBRARIES FOR DATA WRANGLING

Basics of Numpy arrays – Aggregations – Computations on arrays – Comparisons, masks, boolean logic – Fancy indexing – Sorting arrays - Structured data.

Data manipulation with Pandas – Data indexing and selection – Operating on data – Handling missing data – Hierarchical indexing – Combining datasets – Aggregation and grouping – Pivot tables.

UNIT V DATA VISUALIZATION

Importing Matplotlib – Line plots – Scatter plots – Visualizing errors – Density and contour plots – Histograms – Plot legends – Colors – Subplots – Text and annotation – Customization – Three-dimensional plotting - Geographic Data with Basemap - Visualization with Seaborn.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

On completion of the course, the students should be able to:

• Define the data science process.

- Understand different types of data description for data science process.
- Gain knowledge on relationships between data.
- Use the Python Libraries for Data Wrangling.
- Apply visualization libraries in Python to interpret and explore data.

COURSE OBJECTIVES

- To understand the basic concepts of Object Oriented Programming in Java
- To know the principles of in heritance and interfaces
- To define exceptions and use of I/O streams
- To learn the concepts of threads and generics classes
- To design and build simple Graphical User Interfaces using wing components

UNIT-I INTRODUCTION TO OOP AND JAVA FUNDAMENTALS

Object Oriented Programming – objects and classes – features of OOP - OOP in Java – Characteristics of Java – The Java Environment – Java Source File - Compilation. Fundamental Programming Structures in Java – constructors, methods – method overloading, access specifies -static members -Comments, Data Types, Variables, Operators, Control Flow, Arrays, Packages, and Naming Conventions, Case study-simple program using objects, classes and constructors.

UNIT-II INHERITANCE AND INTERFACES

Inheritance – Super classes-sub classes – Protected members – constructors in sub classes - the Object class – abstract classes and methods-final methods and classes – Interfaces – defining an interface, implementing interface, differences between classes and interfaces and extending interfaces - Object cloning - inner classes, Reflection, Array Lists – Strings, Case study - program using inheritance strings and array List.

UNIT - III EXCEPTION HANDLING AND I/O

Exceptions - exception hierarchy - throwing and catching exceptions – built-in exceptions, creating own exceptions, Stack Trace Elements. Input / Output Basics – Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files, Case study-program using Exceptions and File Handling.

UNIT- IV MULTITHREADING, GENERIC PROGRAMMING AND 12 ADVANCED JAVA

Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, Inter-thread communication, Fibers, daemon threads, thread groups. Generic Programming – Generic classes – generic methods – Bounded Types – Restrictions and Limitations, Case study-program using Multithreading and Generic Programming.

UNIT-V EVENT DRIVEN PROGRAMMING

Graphics programming - Frame – Components - working with 2D shapes - Using color, fonts, and images - Basics of event handling - event handlers - adapter classes - actions - mouse events – AWT event hierarchy - Introduction to Swing – layout management - Swing Components – Text Fields, Text Areas – Buttons - Check Boxes – Radio Buttons – Lists – choices - Scrollbars – Windows – Menus – Dialog Boxes, Case study - Program using AWT components and Swing Components.

TOTAL: 60 PERIODS

LIST OF EXPERIMENTS

- 1. Write a Java Program to capture the personal details of a person.
- 2. Develop an application with Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.
- 3. Write a program to perform string operations using Array List.
- 4. Write a program to do the arithmetic operations with required exceptions.
- 5. Write a program to read a file and print on the console
- 6. Write a java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print a value of cube of the number.
- 7. Write a java program to find the maximum value from the given type of elements using a generic function.
- 8. Design a login screen using JAVAAWT components.

COURSE OUTCOMES

Upon completion of the course, the students will be able to:

- Develop Java programs using OOP principles.
- Develop Java programs using inheritance and interfaces concepts.
- Build Java applications using exceptions, I/O streams and Java beans.
- Develop Java applications with threads and generic classes.
- Develop interactive applications using swings.

TAMILS AND TECHNOLOGY

| L | Т | Р | С |
|---|---|---|---|
| 2 | 0 | 0 | 1 |

UNIT I WEAVING AND CERAMIC TECHNOLOGY

Weaving Industry during Sangam Age – Ceramic technology – Black and Red Ware Potteries (BRW) – Graffiti on Potteries.

UNIT II DESIGN AND CONSTRUCTION TECHNOLOGY

Designing and Structural construction House & Designs in household materials during Sangam Age - Building materials and Hero stones of Sangam age – Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple) - Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

UNIT III MANUFACTURING TECHNOLOGY

Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel - Copper and gold - Coins as source of history - Minting of Coins – Beads making-industries Stone beads – Glass beads - Terracotta beads -Shell beads/ bone beats - Archeological evidences - Gem stone types described in Silappathikaram.

UNIT IV AGRICULTURE AND IRRIGATION TECHNOLOGY

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea – Fisheries – Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

UNIT V SCIENTIFIC TAMIL & TAMIL COMPUTING

Development of Scientific Tamil - Tamil computing – Digitalization of Tamil Books – Development of Tamil Software – Tamil Virtual Academy – Tamil Digital Library – Online Tamil Dictionaries – Sorkuvai Project.

TOTAL : 15 PERIODS

| 0 | 0 | 2 | * |

COURSE OBJECTIVES

- To help students groom their personality and build social responsibility.
- To improve the personality traits of students and their creativity
- To help students gain knowledge in rational thinking and aptitude
- To make students think logically and judiciously
- To help student acquire technical skills in C Programming language

UNIT-I SOFT SKILLS ANDAPTITUDE-I

Self-Realization – Self Motivation – Relationship Building – Personality Enrichment-Personality Traits – Intra Personal Communication – Inter Personal Communication – Behavioral Based Perception – Attitude & Behavior – SWOT Analysis

UNIT-II SOFT SKILLS AND APTITUDE-II

Dimensions of Personality – Self Confidence – Open Mindedness – Acceptance – Creativity Strategies for developing creativity – Over coming myths of creativity – Presence of Mind – Staying Focused – Self Acceptance – Self Growth

UNIT-III QUANTITATIVE APTITUDE

Number system – Divisibility Rule–Simplification – Surds and Indices – Square root and Cube root – Averages – Percentage

UNIT-IV LOGICAL REASONING

Number series – Alphabet series – Alphabet test – Word test – Letter Arrangement – Word Arrangement – Coding and Decoding – Analogy.

UNIT-V TECHNICAL APTITUDE IN C - I

Technical aptitude in C: Program Structure – Data types – Variables – Constants – Operators –Decision Making - Switch statement – Looping statements – Functions – Call by reference-Recursive Arrays, single dimensional, Multi-dimensional.

COURSE OUTCOMES:

At the end of the course, the student will be able to

CO1: Build better relationship with all in their social settings

CO2: Engage in creative activities focusing on their career

CO3: Solve the real time and complex problems in aptitude

CO4: Solve critical reasoning and real time application problems

CO5: Apply their knowledge in the basics of C programming

DATA STRUCTURES AND ALGORITHMS LABORATORY

| L | Т | Р | С |
|---|---|---|---|
| 0 | 0 | 4 | 2 |

COURSE OBJECTIVES

- To implement linear and non-linear data structures
- To identify and implement appropriated at a structures for various applications
- To execute different operations of search trees
- To implement various sorting and searching algorithms
- To implement hashing techniques

LIST OF PROGRAMS

Implement the following programs

- 1. List ADT using Python with insert, delete, search and modify operations
- 2. Implement recursive algorithm in python.
- 3. Linked List Implementations of list.
- 4. a. Stack ADT using arraysb. Stack ADT using linked list
- a. Queue ADT using arrays
 b. Queue ADT using linked list
- 6. Infix to Post fix conversion
- 7. Binary Search Trees and Tree traversals
- 8. AVL Trees
- 9. Implement graph traversal techniques BFS and DFS
- 10. Implementation of Minimum spanning tree using Prims algorithm.
- 11. Bubble sort, Selection sort, Insertion sort using Python
- 12. Linear search and Binary search using Python
- 13. Hashing-Linear Probing and Quadratic Probing

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:

HARDWARE: Stand-alone desktops 30 Nos. (or) Server supporting 30 terminals or more

SOFTWARE: Ubuntu C / Python 3

COURSE OUTCOMES:

At the end of the lab course, the student should be able to:

- Identify appropriate data structures for specified problem definition
- Implement operations like searching, insertion, deletion, traversing mechanism etc. on various data structures
- Apply appropriate linear /non-linear data structure operations for solving a given

problem

- Implement appropriate sorting/searching technique for given problem
- Apply appropriate hash functions that result in a collision free scenario for data storage and retrieval.

DATA SCIENCE USING PYTHON LABORATORY

| L | Т | Р | С |
|---|---|---|---|
| 0 | 0 | 4 | 2 |

COURSE OBJECTIVES

- To understand the python libraries for data science
- To understand the basic Statistical and Probability measures for data science.
- To learn descriptive analytics on the benchmark data sets.
- To apply correlation and regression analytics on standard data sets.
- To present and interpret data using visualization packages in Python.

LIST OF PROGRAMS

1. Download, install and explore the features of NumPy, SciPy, Jupyter, Statsmodels and

Pandas packages.

- 2. Working with Numpy arrays.
- 3. Working with Pandas data frames.
- 4. Reading data from text files, Excel and the web and exploring various commands for doing descriptive analytics on the Iris data set.
- 5. Use the diabetes data set from UCI and Pima Indians Diabetes data set for performing the following:
 - a. Univariate analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis.
 - b. Bivariate analysis: Linear and logistic regression modeling.
 - c. Multiple Regression analysis
 - d. Also compare the results of the above analysis for the two data sets.
- 6. Basic plots using Matplotlib.
- 7. Apply and explore various plotting functions on UCI data sets.
 - a. Normal curves
 - b. Density and contour plots
 - c. Correlation and scatter plots
 - d. Histograms
 - e. Three dimensional plotting
- 8. Visualizing Geographic Data with Basemap.

TOTAL: 60 PERIODS

LIST OF EQUIPMENTS

HARDWARE

Stand-alone desktops 30 Nos. (or) Server supporting 30 terminals or more

SOFTWARE

Tools: Python, Numpy, Scipy, Matplotlib, Pandas, statmodels, seaborn, plotly, bokeh Note: Example data sets like: UCI, Iris, Pima Indians Diabetes etc.

COURSE OUTCOMES

- Make use of the python libraries for data science
- Make use of the basic Statistical and Probability measures for data science.
- Perform descriptive analytics on the benchmark data sets.
- Perform correlation and regression analytics on standard data sets
- Present and interpret data using visualization packages in Python.

SEMESTER IV

JMA1405

APPLIED PROBABILITY AND STATISTICS

| L | Т | Р | С |
|---|---|---|---|
| 2 | 2 | 0 | 3 |

COURSE OBJECTIVES:

- To provide basic concepts of discrete, continuous random variables and standard distributions.
- To introduce two dimensional random variables, correlation and regression.
- To acquaint students with statistical testing of hypothesis and its applications.
- To develop the ability to apply the concepts of Estimation Theory and Correlation & Regression in problems.

UNIT I ONE – DIMENSIONAL RANDOM VARIABLES

Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Uniform, Exponential and Normal distributions – Function of a random variable.

UNIT II TWO - DIMENSIONAL RANDOM VARIABLES

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression – Function of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTING OF HYPOTHESIS

Statistical hypothesis – Large sample tests based on Normal distribution for single mean, difference of means and proportions – Small sample tests based on t, Chi-square and F distributions for mean and variance – Goodness of fit – Independence of attributes.

UNIT IV ESTIMATION THEORY

Estimators: Unbiasedness, Consistency, Efficiency and Sufficiency – Maximum Likelihood Estimation – Method of moments – Curve fitting by principle of least squares.

UNIT V CORRELATION AND REGRESSION

Multiple and Partial Correlation – Method of Least Squares – Plane of Regression – Properties of Residuals – Coefficient of multiple correlation – Coefficient of partial correlation – Multiple correlation with total and partial correlations – Regression and Partial correlations in terms of lower order coefficient

COURSE OUTCOMES:

At the end of the course, students will be able

CO1: To understand random variables and use standard distributions in solving real time problems.

CO2: To use joint density functions to perform correlation and regression analysis.

12

12

12

TOTAL: 60 PERIODS

12

CO3: To apply hypothesis testing for making statistical inferences in large and small sample real life problems.

CO4: To use theory of estimation in practical applications and problem solving.

CO5: To understand methods of finding correlation values between variables and use regression analysis for predicting values of variables

PRINCIPLES OF ARTIFICIAL INTELLIGENCE

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES:

- Understand the various characteristics of a problem solving agent
- Learn about the different strategies involved in problem solving
- Learn about solving problems with various constraints.
- Apply A.I to various applications like expert systems etc. •
- Understand the different models of learning

UNIT-I INTRODUCTION TO ARTIFICIAL INTELLIGENCE AND PROBLEM-SOLVING AGENT

Problems of AI - AI technique - Tic - Tac - Toe problem - Intelligent Agents - Agents & environment - nature of environment - Structure of agents - Goal-based agents - Utility-based agents - Learning agents - Defining the problem as state space search - Production system -Problem characteristics - Issues in the design of search programs.

UNIT-II SEARCH TECHNIOUES

Problem solving agents - Searching for solutions - Uniform search strategies - Breadth first search - Depth first search - Depth limited search - Bidirectional search - Comparing uniform search strategies. Heuristic search strategies - Greedy best-first search - A* search - AO* search - Memory bounded heuristic search - Local search algorithms and Optimization problems - Hill climbing search - Simulated annealing search - Local beam search.

UNIT-III CONSTRAINT SATISFACTION PROBLEMS AND GAME THEORY

Local search for constraint satisfaction problems - Adversarial search - Games - Optimal decisions and strategies in games - The minimax search procedure - Alpha-beta pruning -Additional refinements - Iterative deepening.

UNIT-IV KNOWLEDGE AND REASONING

Statistical Reasoning: Probability and Bayes' Theorem - Certainty Factors and Rule - Base Systems - Bayesian Networks - Dempster - Shafer Theory - Fuzzy Logic - AI for knowledge representation - Rule-based knowledge representation - Procedural and declarative knowledge - Logic programming - Forward and backward reasoning.

UNIT-V EXPERT SYSTEMS

Expert systems - Architecture of expert systems - Roles of expert systems - Knowledge Acquisition - Meta knowledge - Heuristics - Typical expert systems - MYCIN - DART -XOON - Expert systems shells.

COURSE OUTCOMES:

At the end of the course, the students will be able to:

Basic knowledge representation, problem solving, and learning methods of artificial intelligence.

73

9

9

9

TOTAL: 45 PERIODS

- Provide the apt agent strategy to solve a given problem
- Represent a problem using first order and predicate logic
- Design applications like expert systems and chat-bot.
- Suggest supervised, unsupervised or semi-supervised learning algorithms for any given problem

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES:

- To study the basic concepts, structure and functions of operating systems
- To learn process management concepts such as process scheduling, CPU scheduling, semaphores and deadlocks etc.
- To learn various memory management concepts •
- To understand the file storage handling management and I/O systems
- To learn the case study of operating system and services •

UNIT I OPERATING SYSTEMS OVERVIEW

Computer System Overview - Basic Elements - Interrupts - Memory Hierarchy - Cache Memory - Direct Memory Access - Operating System Overview - Objectives and Functions -Evolution of Operating System - Operating System Structure and Operations - System Calls -System Programs - OS Generation and System Boot.

UNIT II PROCESS MANAGEMENT

Processes - Process Concept - Process Scheduling-Operations on Processes - Interprocess Communication - CPU Scheduling-Multiple-processor Scheduling - Real Time Scheduling -Threads - Overview - Multi threading Models - Threading Issues - Process Synchronization -Critical Section Problem - Mutex Locks - Semaphores - Monitors - Deadlocks - System Model - Deadlock Characterization-Methods for Handling Deadlocks - Deadlock Prevention -Deadlock Avoidance - Deadlock Detection - Recovery from Deadlock.

UNIT III MEMORY MANAGEMENT

Main Memory - Background - Swapping - Contiguous Memory Allocation - Paging -Segmentation - Segmentation with Paging, 32 and 64 Bit Architecture Examples - Virtual Memory - Background - Demand Paging - Page Replacement - Allocation - Thrashing -Allocating Kernel Memory.

UNIT-IV FILE SYSTEM AND I/O SYSTEM

Mass Storage system - Overview of Mass Storage Structure - Disk Structure - Disk Scheduling and Management, Swap Space Management - File-System Interface - File concept - Access methods - Directory Structure-File Sharing and Protection - File Allocation Methods - Free Space Management - Efficiency and Performance - Recovery - I/O Systems - I/O Hardware - Application I/O Interface - Kernel I/O subsystem - Streams - Performance.

UNIT-V CASE STUDY

Linux System-Design Principles - Kernel Modules - Process Management - Scheduling -Memory Management - Input-Output Management - File System - Inter-process Communication - Mobile OS - iOS and Android-Architecture and SDK Frame work - Media Layer - Services Layer - CoreOS Layer - File System.

TOTAL: 45 PERIODS

75

9

9

9

9

9

COURSE OUTCOMES:

At the end of the course, students will be able to

- Classify operating system components and system calls based on functionality.
- Analyze and evaluate CPU scheduling algorithms and assess the solutions for synchronization problems and dead lock prevention.
- Familiarize in memory management and storage management techniques.
- Analyze the File System Interface, Directory Structure and I/O systems.
- Carryout case studies to generate and illustrate different aspects of various operating systems.

TEXTBOOKS:

COURSE OBJECTIVES

- To learn the working of various data models and get exposed to SQL querying
- To design a databases with ER models and understand the significance of normalization
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures
- To have an introductory knowledge about the Storage and Query processing Techniques
- To familiarize the students with different types of advanced databases

UNIT I DATA MODELS AND QUERYING

Purpose of Database System – Views of data – Data Models – Database System Architecture Introduction to relational databases - Relational Model - Keys - Relational Algebra - SQL fundamentals - Advanced SQL features - Embedded SQL - Dynamic SQL.

UNIT II DESIGN AND NORMALIZATION

Entity-Relationship model - E-R Diagrams - Enhanced-ER Model - ER-to-Relational Mapping Functional Dependencies - Non-loss Decomposition - First-Second-Third Normal Forms Dependency Preservation – Boyce / Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form.

UNIT III TRANSACTION PROCESSING

Transaction Concepts – ACID Properties – Schedules – Serializability – Concurrency Control - Need for Concurrency - Locking Protocols - Two Phase Locking - Deadlock - Transaction Recovery Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery.

UNIT IV IMPLEMENTATION TECHNIQUES

RAID - File Organization - Organization of Records in Files - Indexing and Hashing -Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing - Query Processing Overview - Query optimization.

UNIT V ADVANCED DATABASE SYSTEMS

Distributed Databases Architecture - Data Storage- Transaction Processing - Object-based Databases Object Database Concepts - Object-Relational Features - ODMG Object Model -ODL - OQL XML Databases - XML Hierarchical Model - DTD - XML Schema - XQuery -Database Connectivity - Fundamentals of Database security.

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Design efficient databases and extract information with SQL queries
- Develop preliminary designs of normalized databases
- Analyze the various transactions and provide smooth access of data
- Create organized databases and write optimized queries

DATA COMMUNICATION AND NETWORKS

| L | Т | Р | С |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES

- To study the fundamentals of networking.
- To acquire basic knowledge on data transmission procedures and media.
- To understand error detection and flow control mechanisms.
- To learn about routing and addressing algorithms and protocols.
- To explore transmission control and application layer protocols.

UNIT I INTRODUCTION TO DATA COMMUNICATION

Data Communication - Networks - Network Types - The OSI Model - Layers in the OSI Model - TCP/IP Protocol Suite - Data Transmission - Analog Transmission – Digital Transmission - Transmission impairment - Wired LANs: Ethernet.

UNIT II PHYSICAL LAYER

Introduction - Physical Layer - Digital data - digital signals - Analog data - Analog signals -Synchronous and Asynchronous transfer - Multiplexing - Frequency division multiplexing-Time division multiplexing - Transmission media - Twisted Pair - Coaxial cable - Optical Fibers - Wireless transmission – Microwaves - Radio waves - Infrared.

UNIT III DATA LINK LAYER

Introduction - Link Layer Addressing – Framing - Flow Control - Error Control - Error Detection and Correction - Stop and Wait Protocols - Sliding Window Protocols – HDLC - Media Access Control (MAC) - Random Access - Controlled Access.

UNIT IV NETWORK LAYER

Network Layer Services - Packet switching - Performance - IPV4 Addresses - Network Layer Protocols: IP, ICMP v4 - Unicast Routing Algorithms - Protocols - Multicasting Basics - Congestion Control Algorithms.

UNIT V TRANSPORT LAYER AND APPLICATION LAYER

Transport Layer Protocols - Services - Port Numbers - User Datagram Protocol - Transmission Control Protocol - DNS - Email - WWW and HTTP.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Understand the concept of computer networks and data transmission.
- Understand different schemes used for data transmission.
- Apply error detection and flow control techniques.
- Implement different addressing and routing algorithms.
- Understand about transport layer and application layer protocols.

JPT1001

SOFT SKILLS AND APTITUDE II

L T P C 0 0 2 1

COURSE OBJECTIVES:

- To help students learn various forms of writing and develop content
- To help students acquire time and stress management skills
- To facilitate students to gain required knowledge to understand practical concepts in aptitude
- To develop the thinking and analytical skills of students
- To gain knowledge in concepts of C programming language

UNIT - I SOFT SKILLS AND APTITUDE - III

Communication – on Specific topics – both oral and written – Content development – various forms of writing and specific writing – Brainstorming – Individual – Concept focusing – Public Speaking – Analytical writing.

UNIT – II SOFT SKILLS AND APTITUDE - IV

Importance of Time – Time Management techniques – The art of prioritizing and scheduling – Stress – Positive and Negative Stress - Stress Management techniques – Concept of Goal setting – Importance of Goals – Dream vs Goal – Reasons for failure of Goals – SMART.

UNIT III QUANTITATIVE APTITUDE

Ratio and Proportions – Allegations and Mixtures – Problem on Ages – Profit and Loss and Discount

UNIT IV LOGICAL REASONING

Odd man out series - Blood Relation - Seating Arrangement - Number Ranking

UNIT V TECHNICAL APTITUDE IN C-II

Strings - Storage Classes – Pointers – Preprocessor directives - Structures – Union. Type def – Input/Output – File I/O - Header Files – Type casting – Error handling – Command Line Arguments – Variable Arguments – Memory Management - Bitwise operators.

TOTAL: 30 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able to

CO1: Develop different types of content using the skills learnt

CO2: Manage time and stress competently

CO3: Find answers to real time application problems

CO4: Use logical reasoning skills to solve problems differently

CO5: Apply C programming concepts for coding

| JAL1411 | ARTIFICIAL INTELLIGENCE | L | Т | Р | С |
|----------------|-------------------------|---|---|---|---|
| J111111 | PRINCIPLES LABORATORY | 0 | 0 | 4 | 2 |

COURSE OBJECTIVES:

- To provide students with a theoretical and practical base in Artificial Intelligence.
- Students will able to design, implement, and analyse simple problem solving technique.
- Students will able to identify, formulate, and solve problems.

LIST OF EXERCISES

- 1. Study of Prolog.
- 2. Write simple fact for the statements using PROLOG.
- 3. Write predicates one converts centigrade temperatures to Fahrenheit, the other checks if a temperature is below freezing level.
- 4. Write a program in turbo prolog for medical diagnosis and show the advantage and disadvantage of green and red cuts.
- 5. Implementation of backward chaining and forward chaining.
- 6. Implementation of A* Algorithm.
- 7. Solving 8-Queens problem.
- 8. Solving traveling salesman problem.
- 9. Implement MINIMAX algorithm.
- 10. Write a program to solve water jug problem.
- 11. Implementation of Decision Tree.
- 12. Implementation of K-means algorithm.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able to

- Understand the major areas and challenges of AI
- Apply basic AI algorithms to solve problems
- Develop programming solutions for given problem scenario.
- Describe search strategies and solve problems by applying a suitable search method
- Solve the given problem scenario

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS HARDWARE:

Standalone desktops 30 Nos. (or) Server supporting 30 terminals or more.

SOFTWARE:

LISP / PROLOG / Java / Python

| JCS1312 | DATABASE MANAGEMENT | L | Т | Р | С |
|---------|---------------------|---|---|---|---|
| JC51512 | SYSTEM LABORATORY | 0 | 0 | 4 | 2 |

COURSE OBJECTIVES

- To familiarize with DDL, DML and DCL Commands
- To learn the use of nested and join queries
- To understand functions, procedures and procedural extensions of databases
- To be familiar with database triggers for specific application
- To develop applications using front-end tools and back-end DBMS

LIST OF PROGRAMS

- 1. Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements.
- 2. Database Querying Simple queries, Nested queries, Sub queries and Joins.
- 3. Creation of Views, Sequences, Indexes, Savepoint and commit constraints.
- 4. Database Programming: Implicit and Explicit Cursors with PL/SQL block
- 5. Creation of PL/SQL Procedures and Functions
- 6. Creation of PL/SQL Triggers
- 7. Exception Handling
- 8. Database Design using ER modeling, Normalization and Implementation for any application
- 9. Database Connectivity with Front End Tools
- 10. Mini project (Application Development) in one or two of the following systems
 - a) Student database system
 - b) Inventory Control System
 - c) Online Library Management
 - d) Hospital Management System
 - e) Railway Reservation System
 - f) Personal Information System
 - g) Online Course registration and maintenance System
 - h) Attendance Management System
 - i) Hotel Management System
 - j) E-commerce portal
 - k) Online auction system

TOTAL: 60 PERIODS

COURSE OUTCOMES:

At the end of the course, students will be able to

- Execute typical data definitions, data control and data manipulation commands
- Familiarize with Nested and Join Queries for extracting combinatorial data
- Implement simple applications that useViews
- Develop PL/SQL procedures, functions and packages
- Develop applications using Front-end & Back-end Too lsand also to handle report generation

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS HARDWARE:

Standalone desktops 30 Nos. (or) Server supporting 30 terminals or more.

SOFTWARE:

Front end: Python / Visual Studio or Equivalent Back end: Oracle / MS SQL Server / MySQL / DB2 or Equivalent
